Laurent

Ideal Atmosphere

Discover a new era of retail with automation in your store. Use intelligent lighting, audio and climate control to create the perfect atmosphere for every customer. Automation is the future of retail - be part of this revolution today.

Lighting

Lighting Moods

- ⚡ They adapt to different moments of the day, providing the perfect atmosphere, both during the day and the evening

Automatic Lighting Control

- ⚡ You can forget about manual control. The lighting adapts the colour and intensity level to your working hours.

Simple Operation

- ⚡ Allows easy change of lighting via a multifunctional button or an intuitive app.

Audio

Multiroom Audio

- ⚡ You can easily operate the different zones in the store independently. You can adjust the volume and sound source in different parts of the premises according to your needs.
- ⚡ A solution that uses up to 70% less energy than conventional solutions.

Schedule Music and Announcements

- ⚡ You can programme music playback schedules for different times of the day. For example, more subtle music during the day and more energetic music in the evening.
- ⚡ Use the announcement feature to communicate with guests, announce promotions or provide information on special events.

Climate

Intelligent Temperature Management

- ⚡ Automatic adjustment of the room temperature depending on the time of day and external conditions. The system considers different operating modes (e.g. public holidays).
- ⚡ Integration with air conditioning and heating systems for optimal temperature management.

Perfect Air Quality

- ⚡ Integrating the ventilation system with air quality sensors to automatically adjust ventilation levels as required.

Comfort and Economy

Retail automation offers convenience not only to customers but also to operators. Control via a free app adds flexibility, allowing settings to be controlled from anywhere. Our comprehensive approach contributes to the sustainable and efficient operation of the store.

Energy Management

Continuous Monitoring

- ⚡ Continuous monitoring of utility consumption enables ongoing analysis of the electricity, heat, water and gas used.

Operational Optimisation

- ⚡ Adapt to the market. The system reacts to spot electricity prices, helping you choose the most profitable hours.
- ⚡ Reduce expenses for overloading. With built-in load balancing, you will reduce costs and increase efficiency.

Security

Notifications and Alarms

- ⚡ Immediate notification for situations requiring action, e.g. breakdown of refrigeration equipment. We also provide contact with a service technician via e-mail/phone call.
- ⚡ Recording of data related to notifications and alarms for later analysis.

Monitoring and Response

- ⚡ Flooding? Burglary? Fire? The system will not only notify you but will also react accordingly.
- ⚡ Make use of the multi-stage alarm. The alarm starts with light and sound signals, gradually increasing in intensity.

Access Control

Flexible Access Management

- ⚡ Loxone enables precise management of access to key areas of the restaurant, such as the office or warehouse, minimising the risk of unauthorised access.
- ⚡ Flexibility to adapt access rights according to changes in functions or working hours.

Activity Monitoring

- ⚡ Log all access attempts. Monitor employee activity and identify any anomalies.

Building Integration

- ⚡ Make other systems dependent on access control. Disarm the alarm and turn on lights and music for the arrival of the first employee.
